

What Are the Suggested Vegetables and Fruits for a Pet Rabbit's Diet?

Rabbits in the wild all over the world consume different varieties of plants. Many types of dry and fresh plants and grasses comprise a large part of a rabbit's diet. You are required to know your pet rabbit's diet when you are undergoing **rabbit breeding**.

This article will list some of the fruits and vegetables that rabbits consume and what types of fruits and vegetables you need to buy from the markets to feed your rabbit.

Hay is a Portion of Important Rabbit Food.

The majority of the house rabbit's diet is composed of grass hay. This grass hay is rich in Vitamin A and D; it is also rich in Calcium, proteins, and other nutrients. When a rabbit consumes healthy hay, it helps keep its teeth healthy and its gastrointestinal tract. They need to be available to your rabbit at all times.

You need to avoid the use of alfalfa hay as the main source of hay as it is high in proteins and calories, and this is far more than something that the average house rabbit needs. Fresh foods should also be made an important part of your rabbit's diet.
