What Our Customers Have to Say

Alan Finkel
Partner, Union Innovation

Tony Clark
CEO, TC Consulting

Customer Reviews of our DevOps developers

Robin Hack

Hitesh provided me with all the knowledge I didn't have about DevOps. I hired him to lead one of my teams and he did his job splendidly. All I can do is to thank him for being punctual and finishing my project with an excellent result.

Arne Schulz

Carlos did a fantastic job with my migration of the software. I was new to cloud computing and then I hired him. He showed me things which I wasn't aware of. He took care of the project and ran everything smoothly until the final day. I am happy with the result.

Joakim Nilsson

Lilia inclusion into my team was like thunder for others. She not only did everything at a fast pace but also didn't give any chance to complain about anything. I love the way she handled the project with utmost care and led the team into success.

How to hire DevOps Developers through Optimize

1 Quick Call

Optimize's Director of Engineering will have a quick call with you to better understand your business goals and technical needs

48 Hour Sourcing

48 Hour Sourcing: Get matched with experience driven, pre-vetted remote

angular developer within 48 hours of the call

Review and onboard

Interview the shortlisted angular developers and onboard your optimal hire in under two weeks with a risk-free trial. Don't pay the fees if you are not satisfied.

Frequently Asked Questions

How are Optimize DevOps developers different? —

At Optimize, our specialised team of technical experts assess DevOps developers through a rigorous vetting process including customised coding tests designed specifically based on your requirements to make sure you get only the right talent. Potential candidates are then tested for communication skills and team dynamics to ensure we only match you with talent of the highest calibre. Adding a top DevOps developer with excellent communication skills and who is also a team player will increase team output substantially. We believe in providing top quality DevOps developers only.

How quickly can I hire and get a DevOps developer working? +

. What if I'm not satisfied with the DevOps developer? Is there a trial period or replacement policy available? +

Why choose DevOps for your project?

DevOps is the combination of cultural philosophies, practices, and tools that increases an organization's ability to deliver applications and services at high velocity. It removes the organization's traditional software development and management system by evolving and improving products at a faster pace. This speed enables organizations to serve their customers in a better way and compete with others more effectively in the market.

Why DevOps matters?

Software and the Internet have transformed the world and its industries, from shopping to entertainment to banking. Companies interact with their customers through software. In today's world, companies must transform how they build and deliver software to meet the high demands.

DevOps Approach is based on:

- **Continuous Integration:** It is a software development which involves continuous integration code into the central repository
- **Continuous delivery:** In this process of software development code changes are automatically built, tested, and prepared for a release to production.
- **Microservices:** It is a design approach to build a single application as a set of small services.
- **Infrastructure as code:** In this practice infrastructure is provisioned and managed by using code and software development techniques such as version control and continuous integration.
- **Communication and collaboration:** it is one of the key approaches of DevOps.

Benefits of DevOps

- **Speed:** Moving at high speed will help to adapt to customer query, understand the changing market better, and grow more efficiently with productive results.
- **Rapid Delivery:** Frequent release of new features and bug fixing will make the customer respond in a positive way which will help in innovation of the product.
- **Reliability:** Delivering quality updates will ensure positive reviews from end users keeping the reliability factor intact.
- **Security:** Automated compliance policies, configuration management technique will preserve security.
- **Scale:** Automation and consistency help you manage complex or changing systems efficiently and with reduced risk.
- **Improved collaboration:** Combine workflows of developers and operations team reduces inefficiencies and saves time.

Why choose Optimize?

Proactive Communication

Every engineer in our network can clearly articulate and collaborate with your team members without any hassles.

100% Timezone Overlap

Work with engineers during your working hours. They are flexible to your timing overlap needs.

Hands-on support

We will work with you every step of your journey, from providing candidates to holding regular check-ins and weekly status updates.

Long term relationship

We aim to become your long term technical partner for your development needs. This will help us understand you better and ensure every remote hire is a success.
